Overview

The VXI Technology VT1433B 8-channel digitizer is a C-size, single-slot, register-based VXI module that includes DSP, transducer signal conditioning, alias protection, digitization, and high-speed measurement computation. You can even add an optional arbitrary source or dual-input tachometer. On-board computation of measurement results, fast data transfer to the host computer, and a dedicated high-speed data bus for module-to-module communication, all combine to provide an outstanding measurement architecture for demanding mechanical, acoustic and electrical test applications. Putting so much capability in a single module decreases system cost while increasing system performance.

The VT1433B 8-channel 196 kSa/s Digitizer plus DSP is a C-size VXI module, and may contain either one or two four-channel input assemblies so that the module may have a total of up to eight inputs.

On-board digital signal processing and 32 MB of RAM maximizes total system performance and flexibility.

Option AYF Tachometer Input Specifications

Option AYF Tachometer Input, provides two tachometer inputs. When this option is installed, two of the three SMB connectors on the VXI module are used for tachometer inputs. When this option is not installed, these connectors are normally used for “External Sample” and “Trigger.” Each tachometer input has a programmable trigger level.

Each tach pulse causes a “Tach Edge Time” to be recorded in a 16384-word FIFO. A “Tach Edge Time” is the instantaneous value of the 32-bit “Tach Counter.” A “Decimate” number can be set to ignore a number of tach pulses before recording each Tach Edge Time. A “Holdoff” time can be set to avoid false triggering due to ringing.

One of the tachometer inputs can be programmed for use as a trigger input instead. In this mode, the tachometer option can trigger the system and measure the time between the trigger and the next sample clock edge.

The analog signal from either of the tachometer inputs can be routed to an input channel using the internal calibration path.
