VXI Technology (VTI) Creates New Business Unit....VTI Microwave..

VXI Technology (VTI) announces the formation of a new business unit focusing on the design and fabrication of custom RF/Microwave assemblies. Activities will range from build-to-print fabrication to complete sub-assembly design, layout, and test.

VTI Microwave is a specialized business unit that provides the combined benefits of a small, custom engineering group with the worldwide service and support infrastructure of a large manufacturer of test instrumentation.

“VTI Microwave, an independent business unit of VXI Technology, now extends VTI’s philosophy of open-architecture solutions to the world of custom microwave subsystems and broadband RF switching,” commented Jeff Olsen, Vice President of Sales. “Our customers can expect independent component selection, product-driven documentation, and platform-independent solutions tailored to their exact needs.”
